## 1. Safety Procedures

### 1.1. General Precautions

**General** – Please read the following precautions carefully before installing and connecting the system to a power source.

**Note** – Only qualified and trained service personnel (in accordance with IEC 60950 and AS/NZS 3260) should install, replace, or service the equipment. Install the system in accordance with Country, National or to the U.S. National Electric Code if you are in the United States.

#### **Precautions:**

1. The building facilities in which the product will be used requires a fuse or circuit breaker no larger than 15A for 120Vac (U.S.A.) or 10A, 230Vac (international). The building facilities must protect the Midspan from over current or short-circuits.
2. Before connecting the Midspan to a power source (including power cord requirements), read the Midspan Hardware Setup procedure in Section 2. This procedure as with all procedures and instructions can be found in the Midspan User Manual. To download a copy of the Manual, visit [www.phihong.com](http://www.phihong.com).
3. To prevent the Midspan from overheating, do not operate the product in an area that exceeds the maximum recommended ambient temperature of 40°C. Allow at least 3 to 4 inches of clearance around all ventilation openings.
4. In order to Support the Midspan weight, do not stack the chassis on any other equipment. Shelf mounted equipment requires a stable and durable surface. When installed, do not push or pull on the Midspan when the equipment is installed.
5. The Midspan consists of two rows of “Data” and “Data & Power” ports. The ports use RJ-45 data sockets. Do not connect telephone cables into these ports. Only RJ-45 data cables may be connect to these sockets.
6. Do not work on the Midspan system or connect or disconnect the cables, during periods of lightning activity.
7. The AC or DC plus/socket combination must be accessible at all times, as it serves as the main disconnect device to the product.
8. Before servicing the product, always disconnect the products from its AC and DC source.
9. Disposal of this product should abide by all appropriate National laws and regulations.

## 1.1 Sicherheitsmaßnahmen – Allgemeine Vorsichtsmaßnahmen

**Allgemein** – Lesen Sie die folgenden Vorsichtsmaßnahmen sorgfältig durch, bevor Sie das System installieren und an eine Energiequelle anschließen.

**Hinweis** – Das Gerät darf nur durch qualifiziertes und geschultes technisches Personal (gemäß IEC 60950 [Vorschrift 60950 der Internationalen Elektrischen Kommission] und AS/NZS 3260 [Vorschrift für Australien und Neuseeland]) installiert, ersetzt oder repariert werden. Installieren Sie das System auch in Übereinstimmung mit den geltenden nationalen oder europäischen Vorschriften bzw. Der NEC-Vorschrift, falls Sie sich in den Vereinigten Staaten befinden.

### Vorsichtsmaßnahmen:

1. Die Gebäudeinstallationen, in denen das Produkt benutzt wird, müssen über eine Sicherung oder einen Schutzschalter mit maximal 15A für 120 Vac (USA) oder 10A für 230Vac (international) verfügen. Die Gebäudeinstallationen müssen das Midspan-Device vor zu starkem Strom oder Kurzschlägen schützen.
2. Lesen Sie vor dem Anschließen des Midspan-Device an eine Energiequelle (einschließlich der erforderlichen Anschlussleitungen) die Setup-Anleitung für Ihre Midspan-Hardware in Kapitel 2 genau durch. Dieses Verfahren wird zusammen mit allen weiteren Vorgängen und Anweisungen im Benutzerhandbuch für das Midspan-Device beschrieben. Sie können das Benutzerhandbuch unter [www.phihong.com](http://www.phihong.com) herunterladen.
3. Um das Midspan-Device vor Überhitzung zu schützen nutzen Sie das Produkt nicht in Räumen, die die maximale empfohlene Umgebungstemperatur von 40°C überschreiten. Lassen Sie um alle Lüftungsöffnungen herum mindestens 7,5 bis 10 cm (3-4 inches) frei.
4. Stützen Sie das Gewicht des PoE Midspan-Device nicht ab, indem Sie das Gehäuse auf ein anderes Gerät stellen. Falls Sie das Gerät auf ein Gestell montieren, muss dieses eine stabile und haltbare Oberfläche haben. Nach der Installation des Systems bewegen Sie das Midspan-Device nicht mehr.
5. Das Midspan-Device enthält zwei Reihen mit "Datenports" und "Daten-und-Stromports." Die Ports verwenden RJ45-Datenanschlüsse. Schließen Sie keine Kabel an und trennen Sie keine Kabelverbindungen während Gewittern mit Blitzen.
6. Führen Sie an dem Midspan-System keine Arbeiten durch schließen Sie keine Kabel an und trennen Sie keine Kabelverbindungen während Gewittern mit Blitzen.
7. Der Steckanschluss für Gleich- oder Wechselstrom muss jederzeit zugänglich sein, da er als Haupttreppengerät für das Produkt dient.
8. Trennen Sie das Produkt immer erst von der Stromquelle, bevor Sie Wartungs- oder reparaturarbeiten daran durchführen.
9. Entsorgen Sie dieses Produkt gemäß aller geltenden Gesetze und Vorschriften Ihres Landes und der EU (falls Sie sich in einem Land der EU befinden).

## 2. Midspan Hardware Setup

## 2.3 Connecting Ethernet Cables\*

Figure 7: POE370U-480-24N connected through 'data & power' line

Figure 8: NIC Cable Connected\*

## 2.4 Connecting USB and Power Cables

### USB cable:

The USB cable is connected to the USB connector located in the front side of the Midspan and a USB port on your PC/laptop.

Figure 9: USB Cable\*

Figure 10: USB Cable Connected

### AC power cord:

The AC power cable is connected to the AC power connector located in the rear side of the Midspan and the power outlet.

Figure 11: AC Power Cord\*\*

\*Ethernet and USB cables are not included

\*\*AC power cord may be ordered separately

## 2.5 Powering UP

Midspan receives power via the power cord. In order to apply or remove power to/from the Midspan connect or disconnect the AC power cable to/from the AC power connector on the rear side of the unit.

With AC power applied, the unit starts-up and the internal fans are active. The device runs through a quick power-on test, which takes less than 10 seconds. During this period, all ports are initially disabled and the port indicators light up. The sequence of the port LEDs are shown in section 2.6 LED Indicator – Cold Start. Ports are now operating under normal conditions.

## 2.6 LED Indicator:

### Cold Start:

- a. AC – LED turns ‘green’ » remains on
- b. NIC – LED turns ‘green’ » red » green » turns off » red » turns off (unless connected)
- c. 24-Ports (with ports connected) – LED turns ‘orange’ » green » orange » green » turns off – LED turns ‘green individually » ports 1,9,17 » ports 2,10,18 » ports 3,11,19 » ports 4,12,20 » ports 5,13,21 » ports 6,14,22 » ports 7,15,23 » ports 8,16,24 » All 24-Ports are connected – LED remains ‘green’
- d. 24-Ports (without ports connected) – LED turns ‘orange’ » green » orange » green » turns off – LED blinks ‘orange individually » ports 1,9,17 » ports 2,10,18 » ports 3,11,19 » ports 4,12,20 » ports 5,13,21 » ports 6,14,22 » ports 7,15,23 » ports 8,16,24 » Blinks ‘orange’ across all 24-Ports

### When ‘System Reset’ is clicked on the GUI (applications file):

- a. AC – LED remains ‘green’
- b. NIC – LED remains off until the unit is connected
- c. 24-Ports (with ports connected) – same sequence as Cold Start
- d. 24-Ports (without ports connected) – same sequence as Cold Start

Table 1: LED Indicator

Indicator	Conditions			
	LED Off	Green	Orange	Blinking Orange
Port LED	Indicates port is disabled	Indicates port is connected	Indicates port has an error	Indicates port is disconnected but enabled
NIC LED	Indicates NIC is disconnected from Network	N/A	Indicates NIC is connected to Network	N/A
AC LED	Indicates Midspan is not powered	Indicates Midspan is powered	N/A	N/A

## 2.7 Rack-Mounting Installation

Figure 12: Rack Mounted Midspan (Front)

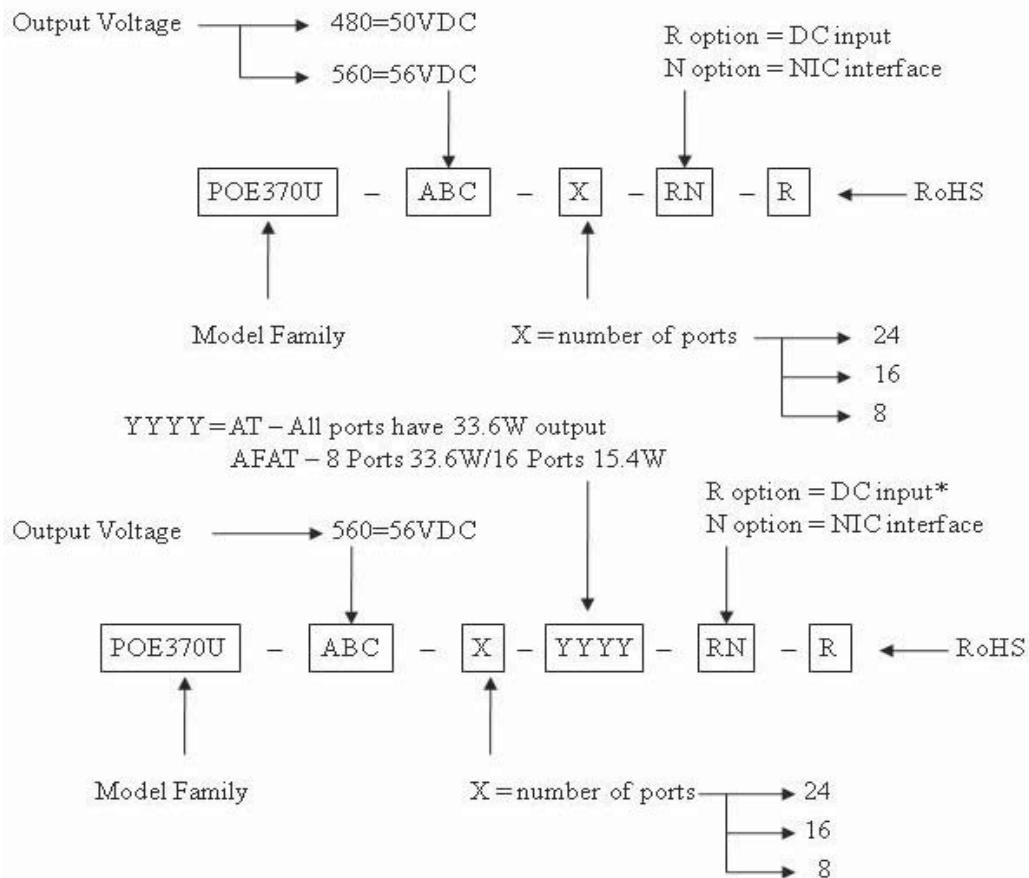

Figure 13: Rack Mounting Bracket and screws (side/rear)

Position the Midspan on the rack. Arrange the mounting bracket to the corresponding screw holes on the Midspan. Keep the screw area visible to insert screws, and then tighten the screws. Screws and brackets will be included in the package.

## 2.7 Technical Specifications

Figure 14: Technical Specifications

### Mechanical Specifications:

Dimensions - 17.25 inch (438 mm) length  
 8.98 inch (228 mm) width  
 1.75 inch (44.5 mm) height

### Environmental Specifications:

\*Contact Phihong Sales for this option

## **Electrical Specifications:**

Table 2: Electrical Specifications

Parameters	Specifications		
AC Input Voltage Rating	100V AC to 240V AC		
AC Input Voltage Range	90V AC to 264V AC		
AC Input Current	5.5A (RMS) at Max Load		
AC Input Frequency	47Hz to 63Hz		
Max. In-Rush Current	30A for 115V AC at Max. Load 60A for 230V AC at Max. Load		
DC Input Voltage Range (-R Option)	47V DC to 57V DC		
DC Input Current	8.7A Max.		
AC Output Voltage	POE370U		POE576U
	-480	-560	-560
	50VDC	56V DC	56V DC
Max Load Current	0.32A	0.275A	0.65A
Output Power, per Port			
POE370U	15.4W (not to exceed total output power)		
POE576U-AT	33.6W (not to exceed total output power)		
POE576U-AFAT	Ports 1-8: 33.6W / Ports 9-24: 15.4W (not to exceed total output power)		
Total Output Power	No. of Ports		
	-8	-16	-24
POE370U	125W max	250W max	370W max
POE576U-AT	268W max	537W max	N/A
POE576U-AFAT	N/A	N/A	515W
Nominal Output Voltage	44V DC to 57V DC		

### 3. Phihong GUI and USB Driver Installation:

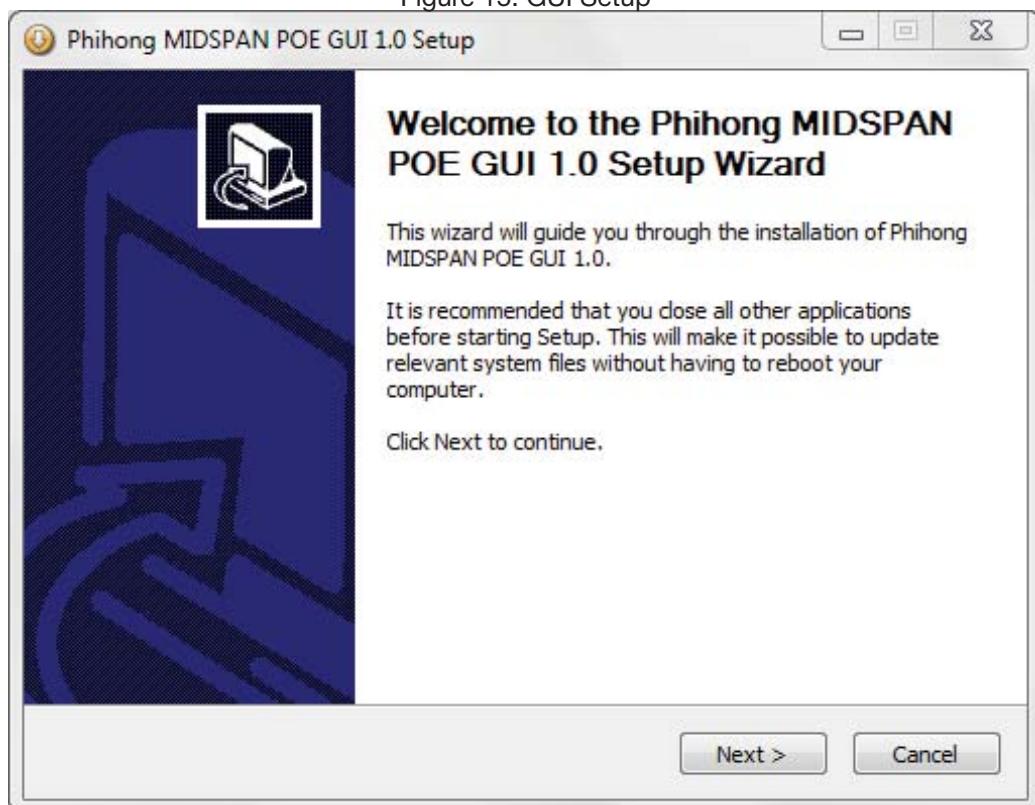

Please locate and download the file **Phihong GUI Installation** from the support section of the Phihong websites: [www.midspans.com](http://www.midspans.com) or [www.phihong.com](http://www.phihong.com).

Please follow the Installation Wizard to install the Phihong GUI for your model, and the USB-to-Serial Com Port driver. The USB-to-Serial Com Port driver is necessary for communicating between the Midspan via a Communication Port on the PC.

Example of the  
Setup File

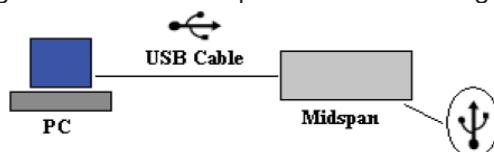

Figure 15: GUI Setup

**Note:** Please refer to the Phihong website to insure you are installing the latest version of the Phihong GUI. The example shown is using the Midspan POE GUI.

#### 3.1 PC-to-Midspan Connection via USB/RS232

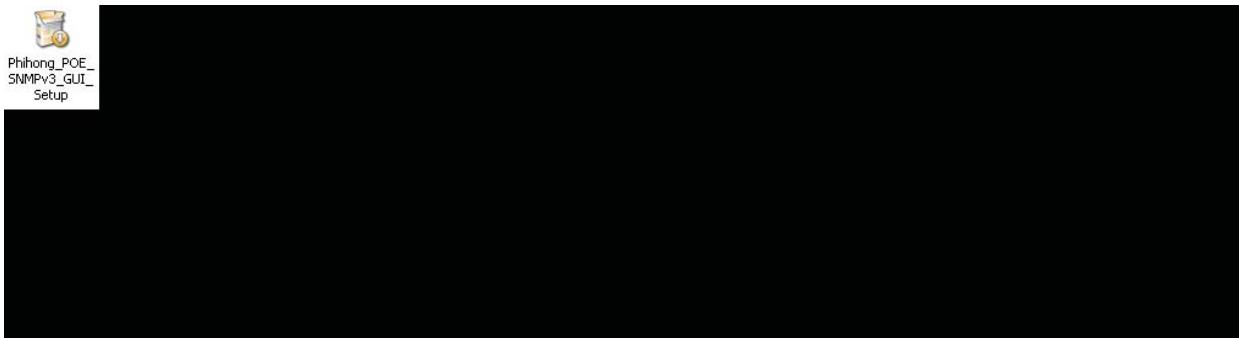

Figure 16: PC-to-Midspan Connection Diagram

### 3.2 Device Manager: to view Port Properties

When you are ready to begin, please connect the proper end of the USB-to-Serial cable to your Midspan and the other to an available USB port on your PC. If you installed the USB driver described above, your PC will locate the new hardware.

To view which Serial COM Port your Midspan is installed please follow the instructions:

Please click **Device Manager**, the following window will open:

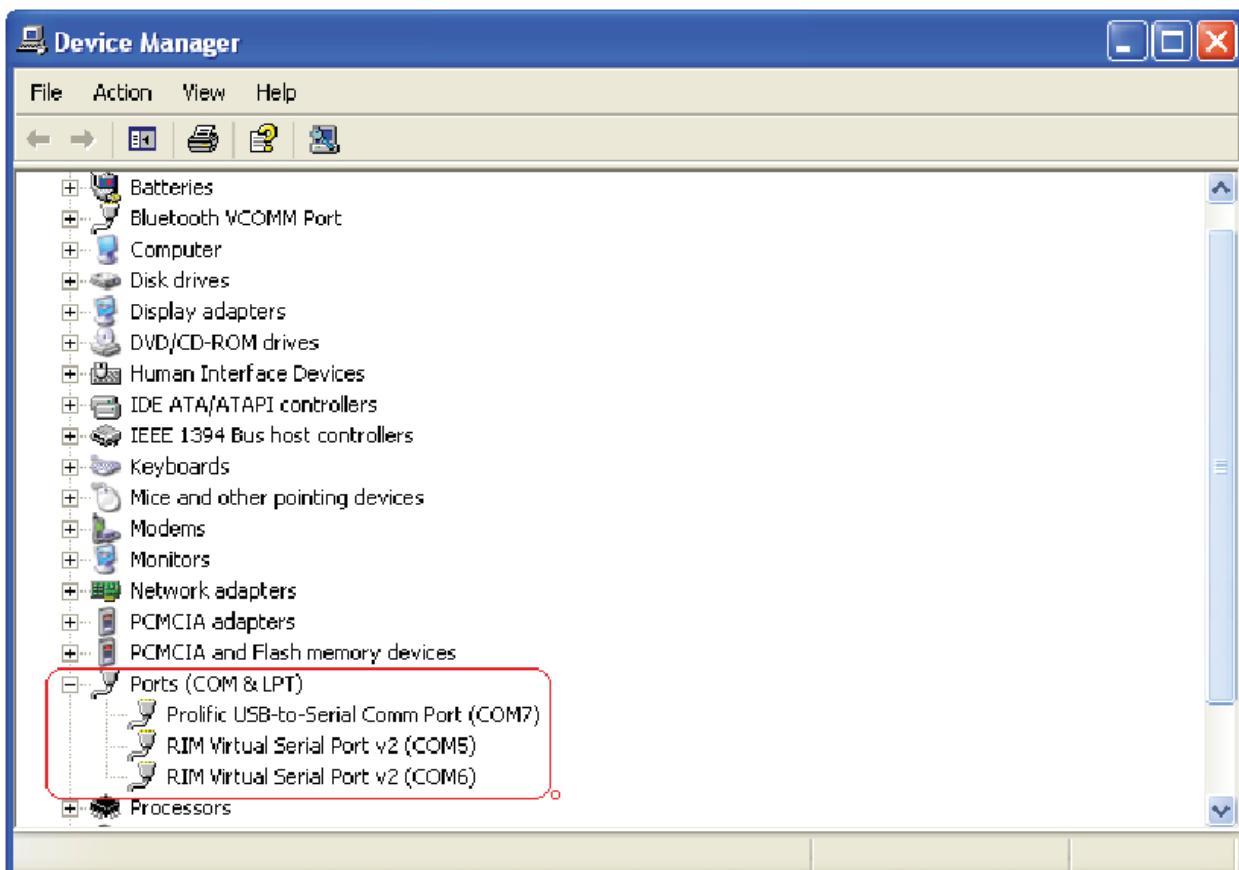

Figure 17: Device Manager

**Locate and Expand 'Ports (COM & LPT)'**

Double Click the Prolific USB-to-Serial Comm Port (COM7). In this example the USB-to-Serial Comm port is installed on Com1. The Com port will vary upon user.

Figure 18: Prolific USB-to Serial Com Port Properties/General Settings

Click **Port Settings**. Assure Port Setting is as shown. Click **Advanced...**. Click the pull down menu and select the Com Port Number or stay with the default.

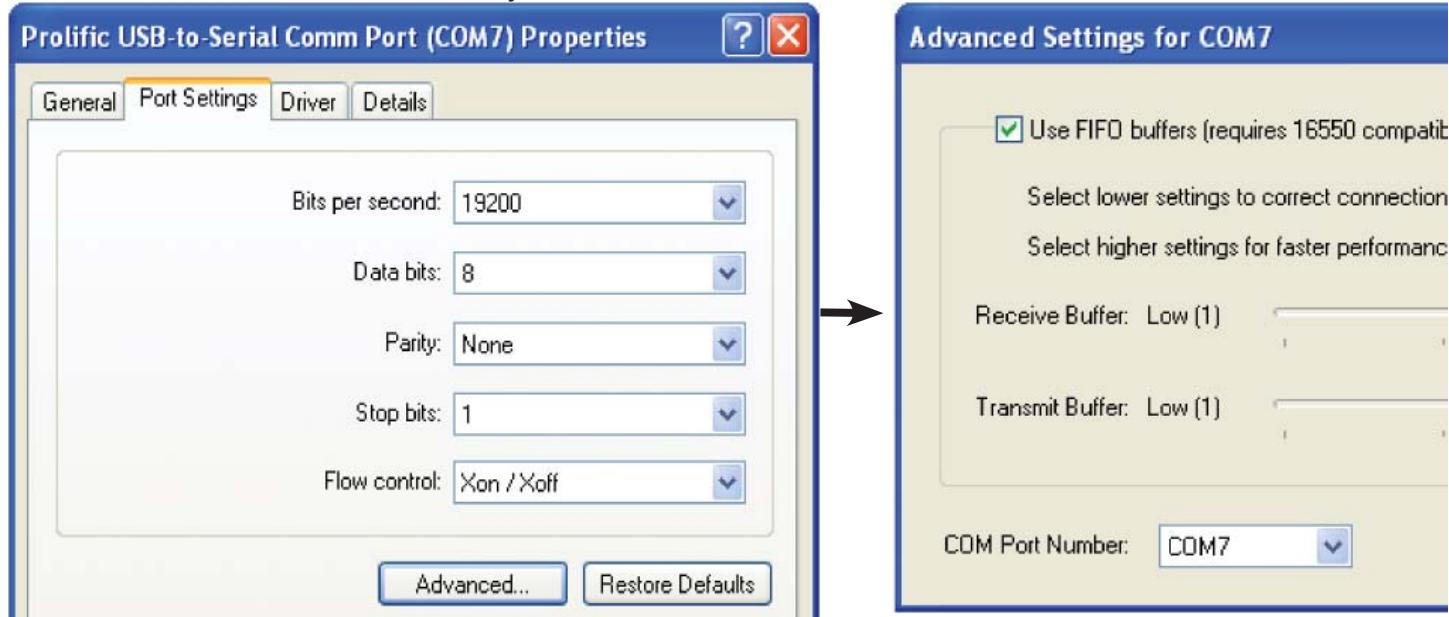

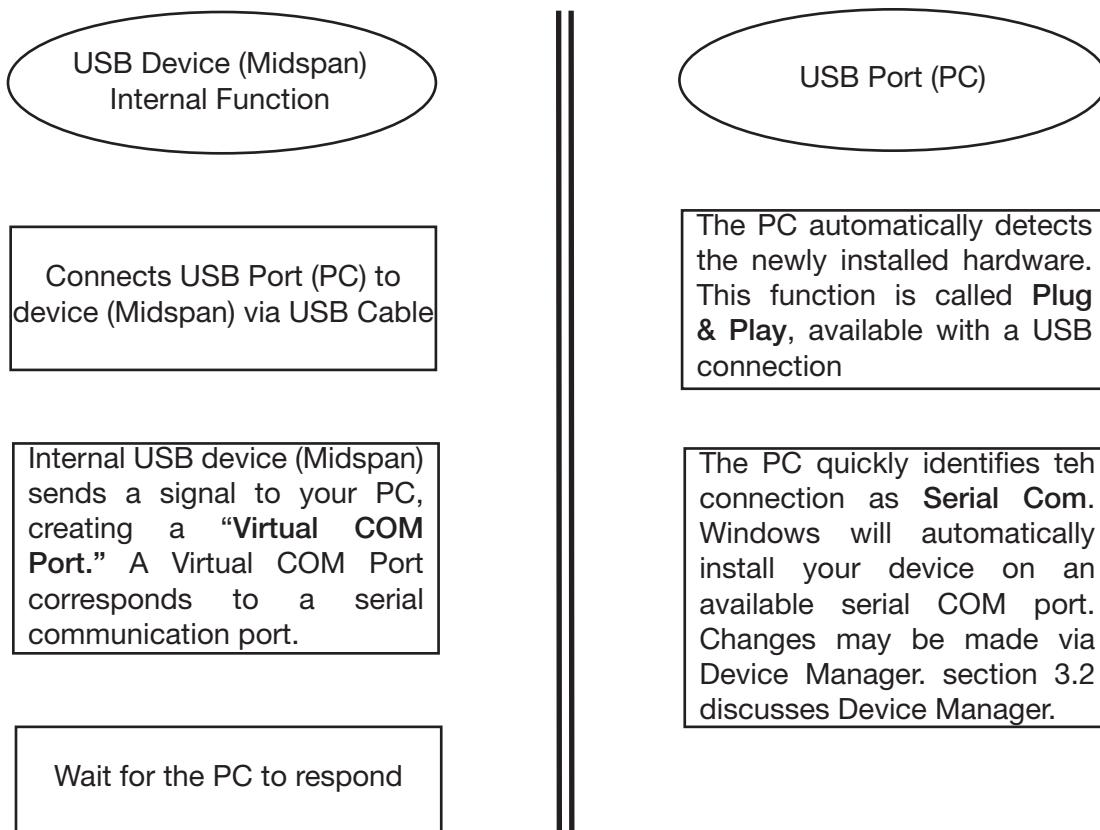

Figure 19: Prolific USB-to Serial Com Port Properties/Advanced Settings

Click **OK** to save all changes.

**Notes:** Users should write down the Com Port number as the GUI will need to know the exact port on which to search for devices.

### 3.3 USB Block Diagram

Figure 20: USB Block Diagram

**Note:** Assume USB-to-Serial-Com Port driver is installed. Users' PC will automatically detect the newly installed/connected hardware.

## 4. Midspan GUI

The firmware is supplied with a Graphical User Interface (GUI), which is used to configure and manage the PoE midspan system. If you have successfully installed the Phihong GUI and USB driver – Please locate the Phihong Midspan POE GUI on your desktop or from your Start Menu.

### 4.1 GUI Main Window

Step 1: Choose connection type

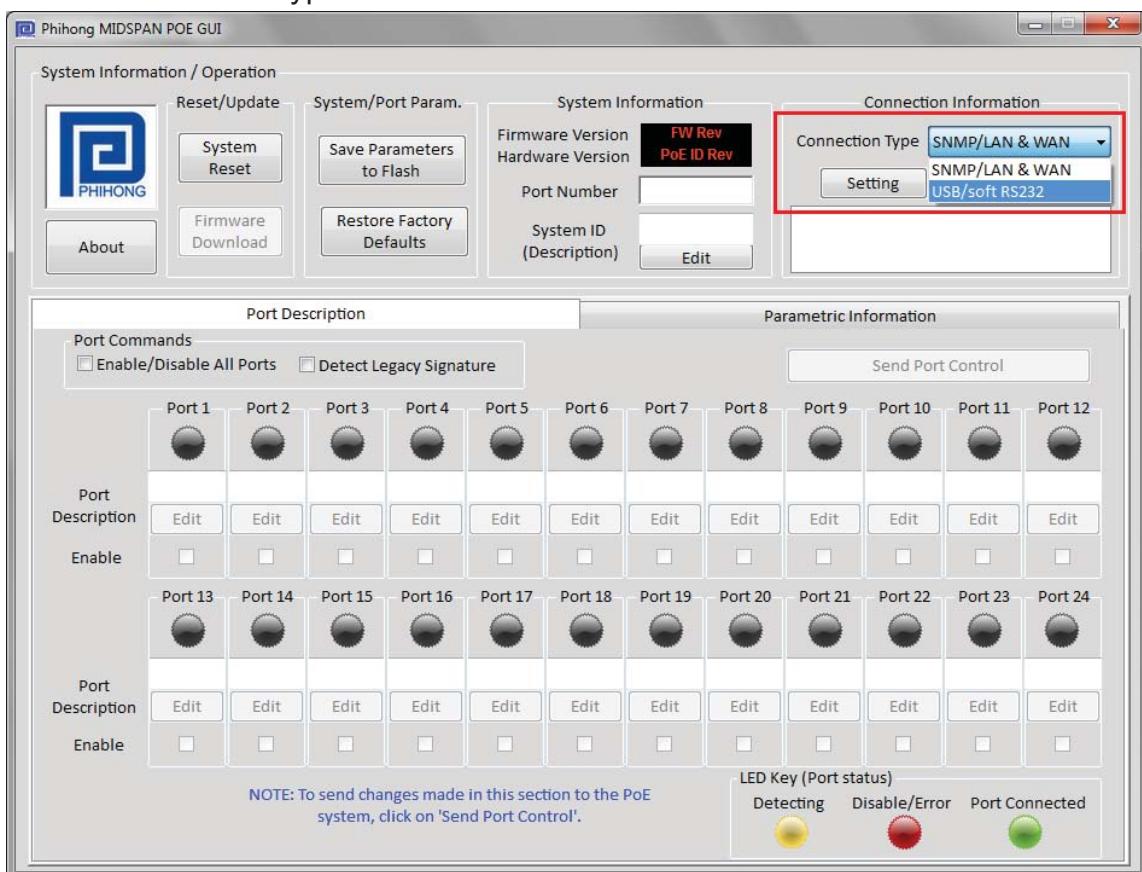

Figure 21: GUI Main Window

Step 2: Select Com Port number then press Search POE and highlight the midspan

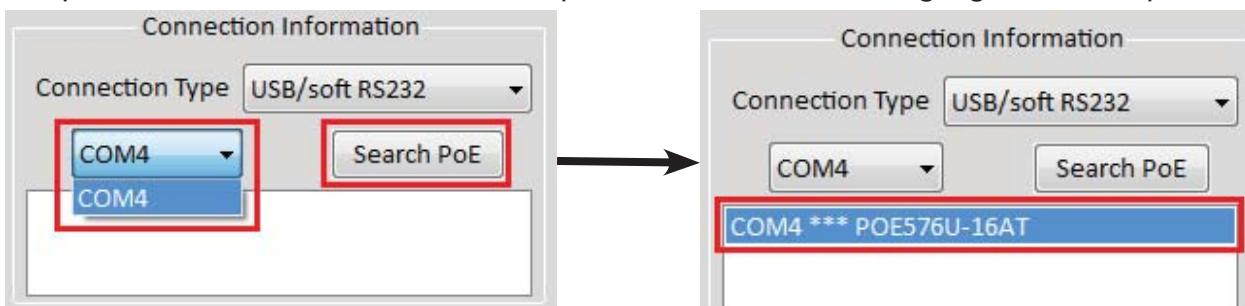

Figure 22: GUI Connection Information

## 4.2 GUI System Control and Information:

The System Control and Information panel on the GUI supports the main system level parameters for the µP. It also displays information about the PoE ID, firmware revision and system status.

Figure 23: System Setup, Control, Information, and Port Commands

Reset/Update		System/Port Param.		System Information	
<b>System Reset</b>		<b>Save Parameters to Flash</b>		<b>Firmware Version</b> <b>0.9</b>	<b>Hardware Version</b> <b>2.0</b>
<b>Firmware Download</b>		<b>Restore Factory Defaults</b>		<b>Port Number</b> <b>24</b>	
				<b>System ID (Description)</b>	<b>Edit</b>

The system level parameters that can be configured are:

- *System Reset* – This is a function that allows the GUI to reset the software on the µP. (If System Reset is set and the GUI does not respond, user must click “Reset GUI”)
- *Firmware Download* – This feature is used to download new application/firmware codes onto the µP. Please refer to the Phihong website [www.midspans.com](http://www.midspans.com) for the latest firmware for your midspan – POE Firmware.

**Note:** Please allow the GUI a few seconds to respond to the commands selected. DO NOT click or check any commands simultaneously. If a command is selected more than once within two seconds, the GUI may not respond properly.

The “Save Parameters to Flash” button will save system and port parameters to flash memory, so that they can be used to the firmware across reboots of the µP.

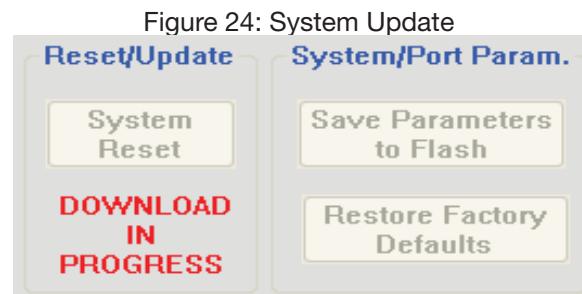

The “Restore Factory Defaults” button will reset the defaults in the firmware, and clear any stored data in the flash memory, the device will reset automatically. After the device has successfully reset, the “System Status” will read “0.” Click “Reset GUI” if necessary. **To make the factory defaults permanent, the user must click “Save Parameters to Flash.”**

The System ID field specifies the hardware revision of the PoE device. The firmware version is represented in a major/minor format.

System ID/Name – click “Edit” to edit/change the description of the system. If you click “Cancel”, the previous description will be set for the system. **To make this permanent the user must click “Save Parameters to Flash.”**

During the 'Download In Progress', the GUI function buttons will be temporarily disabled.

Example of GUI firmware file:

PoE576FirmwareV09\_051509.s99      73 KB    599 File      5/15/2009 9:01 AM

### 4.3 GUI Port Description:

The Port Description panel shows 24-ports. On the PoE Midspans that have 8 or 16-ports, the port numbers higher than the system port count will be shaded grey and disabled. Each section specifies the individual port descriptions for the system.

Figure 25: Port Description

Port Description												Parametric Information			
Port Commands <input type="checkbox"/> Enable/Disable All Ports <input checked="" type="checkbox"/> Detect Legacy Signature												Legacy Detect is Enabled			
	Port 1	Port 2	Port 3	Port 4	Port 5	Port 6	Port 7	Port 8	Port 9	Port 10	Port 11	Port 12			
Port Description	<input type="button" value="Edit"/>														
Enable	<input checked="" type="checkbox"/>														
	Port 13	Port 14	Port 15	Port 16	Port 17	Port 18	Port 19	Port 20	Port 21	Port 22	Port 23	Port 24			
Port Description	<input type="button" value="Edit"/>														
Enable	<input checked="" type="checkbox"/>														
NOTE: To send changes made in this section to the PoE system, click on 'Send Port Control'.															
<b>LED Key (Port status)</b>  Detecting  Disable/Error  Port Connected															

Changes to the port configuration in this section can be enacted when the user clicks the “Send Port Control” button. It will send the port information to the µP for 24-Ports. Please allow the GUI 10 seconds to refresh when this action is taken.

**Port Description** – Click “Edit” to edit/change the description of the port. Click “Ok” to set description on the GUI screen. If you click “Cancel”, the previous description will be set for that particular port. **Click “Send Port Control” to send the descriptions to the system. To make this permanent, the user must click “Save Parameters to Flash.”**

**Enable** – This check box can administratively enable or disable the selected port. If “Enable/Disable All Port” checkbox is selected, all ports will be enabled. Initially, the checkbox is not checked, but by default all ports are enabled. **Click “Send Port Control” to send the command to the system. To make this permanent, the user must click “Save Parameters to Flash.”**

If “Detect Legacy Signature” checkbox is selected, all ports are enabled and the firmware will try to detect legacy devices. By default, legacy detection is disabled. The message in blue states that the “**Legacy Detect is Enabled**” (Figure 16). **Click “Send Port Control” to send the command to the system. To make this permanent, the user must click “Save Parameters to Flash.”**

The different colored LEDs show the status of the individual ports. A ‘Yellow’ LED shows the port is detecting or ready to be connected. A ‘Red’ LED shows the port as Disable/Error. A ‘Green’ LED shows that the port is connected to a compliant load.

Figure 26: LED key (Port Status)

#### 4.4 GUI Parametric Information:

This section allows users to review, but not edit, Parametric Information for each port.

Figure 27: Parametric Information

Port Description												Parametric Information															
	Port 1	Port 2	Port 3	Port 4	Port 5	Port 6	Port 7	Port 8	Port 9	Port 10	Port 11	Port 12		Port 13	Port 14	Port 15	Port 16	Port 17	Port 18	Port 19	Port 20	Port 21	Port 22	Port 23	Port 24

Discovery R	131070	131070	131070	131070	131070	131070	131070	131070	131070	131070	131070	131070		131070	131070	131070	131070	131070	131070	131070	131070	131070	131070	131070	131070		
Discovery C	[uF]		[uF]																								
Current (mA)	0	0	0	0	0	0	0	0	0	0	0	0		0	0	0	0	0	0	0	0	0	0	0	0	0	
Voltage (V)	2.8	2.6	2.7	2.9	2.9	3.0	3.0	2.8	3.0	2.7	3.0	2.7		0: 15.4W													
Power (mW)	0	0	0	0	0	0	0	0	0	0	0	0		0	0	0	0	0	0	0	0	0	0	0	0	0	
Class Current	0	0	0	0	0	0	0	0	0	0	0	0		0	0	0	0	0	0	0	0	0	0	0	0	0	
Determined Class	0: 15.4W		0: 15.4W																								

The Port Parametric Information panel has the following set of parameters that are displayed:

- Discovery R (ohms) – This value represents the discovered resistance (R) of the port in ohms.
- Current (mA) – This value represents the current (I) of the port in millamps
- Voltage (V) – This value represents the voltage (V) of the port.
- Power (mW) – This value represents the power of the port in milliwatts.
- Class Current (mA) – This value represents the class current of the port in millamps.
- Determined Class – This value represents the class of the discovered device.

**Note:** If the ports are less than 24-ports for the system those ports greater than the total system port count will read all zeros “0”. In the figure above, Port 1 is connected to a compliant load while Ports 2-24 are ready to be connected.

## 5. Troubleshooting:

If problems occur with the Midspan, verify the following:

The troubleshooting solutions provided can only solve minor problems. If your problem is not listed, please contact our Phihong Sales for further technical assistance. All up-to-date contact information can be found on our website [www.phihong.com](http://www.phihong.com).

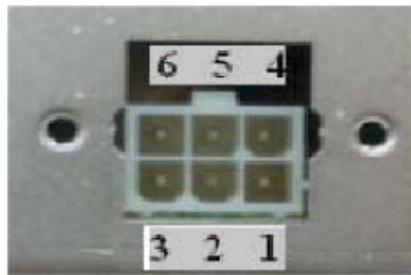

Table 3: Troubleshooting

Problem	Possible Solutions
Midspan does not power up	<ol style="list-style-type: none"><li>1. Assure that the AC power cord is connected</li><li>2. Assure that the AC power cord is in good condition</li><li>3. If solutions 1 &amp; 2 are true; then disconnect the AC power cord and reconnect. Observe the Port LEDs to verify a proper power up.</li></ol>
AC LED not lit	Verify Midspan is properly connected to an AC power source
Port LED do not light 'Green'	<ol style="list-style-type: none"><li>1. Port maybe disabled and needs to be enabled using the GUI. Ensure Ports are enabled, then 'Save Flash Parameters.'</li><li>2. Assure Ports are connected to a Network</li></ol>
The GUI window does not update port status.	Click 'System Reset' and wait for the System to Reboot
Others. Please verify the following:	<ol style="list-style-type: none"><li>1. Power is applied to the Midspan.</li><li>2. The network Ethernet cable is connected to the Data port.</li><li>3. The power device Ethernet cable is connected to the Data &amp; Power port.</li><li>4. Proper type of Ethernet cable is used; do not use crossover-type Ethernet cable.</li><li>5. Cable pairs are connected to corresponding ports.</li></ol>

## Appendix A: Optional RPS – option R

**Please contact Phihong Sales for more information**

Figure 28: DC Power Connector

Pin	Description

## Appendix B: Optional NIC Interface – Option N

### PC-to-Network-to-Midspan:

Figure 29: PC-to-Network-to-Midspan Diagram

### NIC Interface Setup:

**NOTE:** Assure the connection path between your PC and the Midspan. Skip **Step 1** if you wish to use our Phihong GUI to communicate with the Midspan.

1. Visit [www.midspans.com](http://www.midspans.com) to download the latest **SNMP MIB for the NIC interface**.

Example **SNMP MIB file** (please check our website for updates):

phihong060809.txt 13 KB Text Document 8/9/2006 9:11 AM

If you choose to use your own SNMP console, please rename the SNMP MIB text file to the file extension that matches your SNMP Console. Follow the instructions for your SNMP Console to install the MIB file.

Please check the Phihong website ([www.midspans.com](http://www.midspans.com)) occasionally for the latest updates for the MIB and SNMP Firmware.

Example of a **SNMP Firmware file** (please check out website for updates):

0608095973-b14-3.bin 58 KB BIN File 8/9/2006 9:11 AM

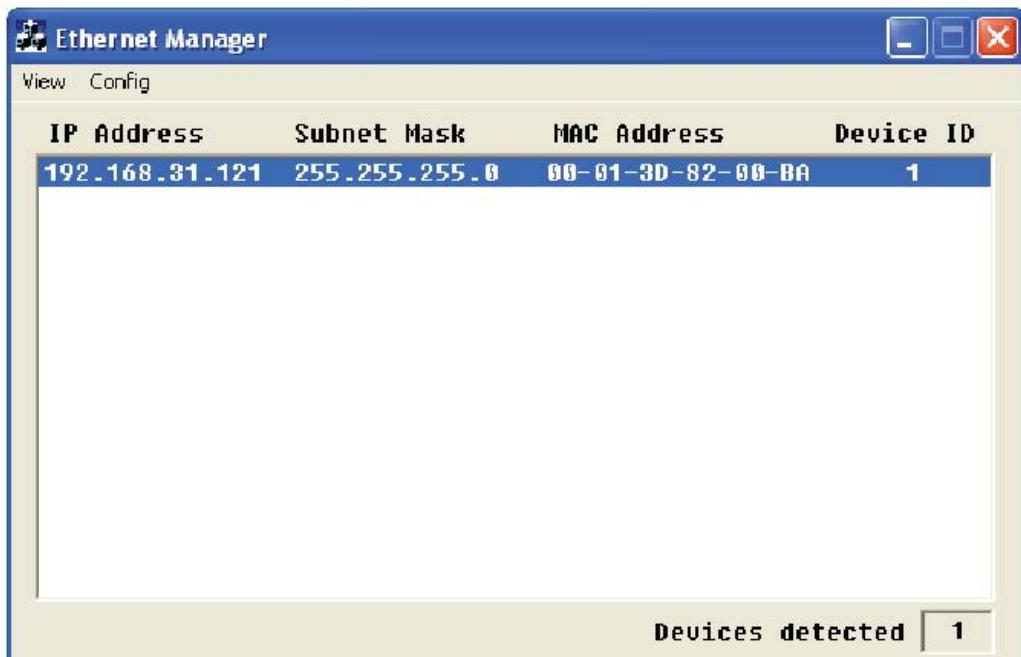

2. Visit [www.midspans.com](http://www.midspans.com) to download the Ethernet Manager tool (**etm.exe**). **EtM.exe** is a Device Management Utility that runs under the Windows 32 bit environment and is used to setup the IP address, subnet mask, and MAC address of your SNMP device. For more advanced setup settings, use Internet Explorer or another Internet Browser.

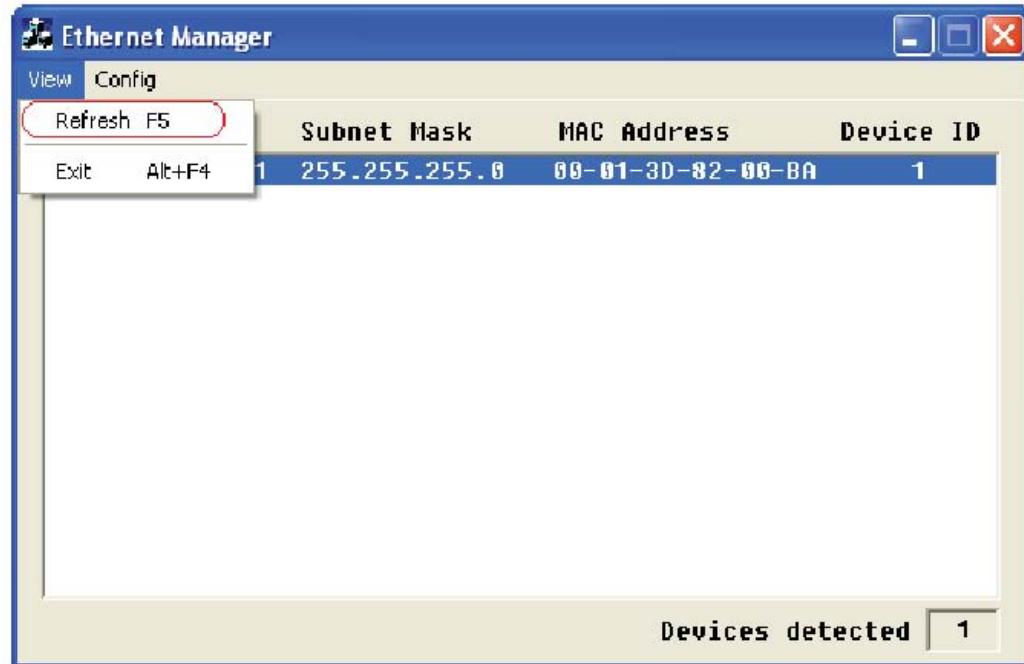

**NOTE:** Your IP Address may be different from the example shown below

3. Execute etm.exe       Ethernet Manager tool
4. Assuming the connection path between your PC and the Midspan is adequate; the Ethernet Manager tool will detect your SNMP device.

Figure: Ethernet Manager

5. If your device is not found, check the connection and click View » Refresh

## 2. Advanced Setup Options

For Advanced Setup Configuration: click Config » Device Settings OR type the IP address in your Internet Browser. Your Internet Browser will open with the following window:

Figure 31: Controller Login

The screenshot shows a Microsoft Internet Explorer window titled "Configuration - Microsoft Internet Explorer". The address bar contains "http://192.168.31.121/Login\_IP\_MAC\_Firw/". The main content area displays the PHIHONG logo and the text "Power Over Ethernet". Below this, a section titled "Controller Status" contains a table with three rows: IP Address (192.168.31.121), MAC Address (00-01-3D-82-00-BA), and Firmware Release (Ver:1.0 (2009 Mar 6)). At the bottom of the page is a blue link labeled "Setup Login". The browser's status bar at the bottom shows "Done" and "Internet".

Click Setup Login  
Default User: ADMIN  
Default Password: (leave area blank)

**NOTE:** If you forget your login password, please contact Phihong Sales for further instructions. For up-to-date contact information please visit our website [www.phihong.com](http://www.phihong.com).

### 3. Controller Setup

Figure 32: Controller Main Window

Port Status

Port	Enabled	Voltage	Current	Power	Status	Port	Enabled	Voltage	Current	Power	Status
1	On	2 V	0 mA	0 mW	Normal	13	On	2 V	0 mA	0 mW	Normal
2	On	2 V	0 mA	0 mW	Normal	14	On	2 V	0 mA	0 mW	Normal
3	On	3 V	0 mA	0 mW	Normal	15	On	2 V	0 mA	0 mW	Normal
4	On	2 V	0 mA	0 mW	Normal	16	On	2 V	0 mA	0 mW	Normal
5	On	2 V	0 mA	0 mW	Normal	17	On	2 V	0 mA	0 mW	Normal
6	On	2 V	0 mA	0 mW	Normal	18	On	2 V	0 mA	0 mW	Normal
7	On	2 V	0 mA	0 mW	Normal	19	On	3 V	0 mA	0 mW	Normal
8	On	2 V	0 mA	0 mW	Normal	20	On	2 V	0 mA	0 mW	Normal
9	On	2 V	0 mA	0 mW	Normal	21	On	2 V	0 mA	0 mW	Normal
10	On	2 V	0 mA	0 mW	Normal	22	On	2 V	0 mA	0 mW	Normal
11	On	2 V	0 mA	0 mW	Normal	23	On	2 V	0 mA	0 mW	Normal
12	On	2 V	0 mA	0 mW	Normal	24	On	3 V	0 mA	0 mW	Normal

Send Command Port 1 Command PortEnable

Port Status:

The main window of the controller is a simple GUI that allows the user to enable and disable midspan ports. It is also a limited display of parametric information. A more complete list of parametric information is available using Phihong's GUI software available on the website [www.midspans.com](http://www.midspans.com).

### 3.1 System Administration

Figure 33: Controller System Administration

The screenshot shows the 'Device Configuration' page of the PHIHONG controller. On the left, a sidebar lists 'Status', 'System', and 'SNMP'. The main area contains three sections: 'Administration' (Administrator: admin, Password: [redacted]), 'LAN' (IP Address: 192.168.31.101, Subnet Mask: 255.255.255.0, Gateway: [redacted], DNS Server: 168.95.192.1, DHCP Client: Enable), and 'System Tools' (Firmware Backup, Firmware Update, Restore Default Settings, Reboot System). A 'Save' button is at the bottom.

**NOTE:** If you change the Administrator name and password, users should ensure that it is written down in safe place for reference.

Click **Save** to make any changes permanent.

Ok. Settings have been saved successfully

**Back**    **Reboot**

Click **Reboot** to reboot the system with the new changes. This may take a few minutes depending on the connection speed. Check the Midspan IP Address again as it may have change depending on the user settings for **DHCP Client**.

Click **Back** to review or make additional changes.

## Configuration Description

Table 5: Controller Setup

Controller Setup		
	Default Settings	Description
Administrator	Admin	The login administrator is a user defined name that is used at login. Please write down your new login name in a safe location for future use.
Password	(Blank)	The login password can be empty or 1-14 characters long. Please write down your new password in a safe location for future use. The password is also used while performing SNMP Firmware updates.
IP Address	192.168.1.111	Four groups of numbers assigned by the network server (DHCP mode Enabled) or User defined (DHCP mode disabled)
Subnet mask	255.255.255.0	Four groups of numbers assigned by the Network server (DHCP mode enabled) or user defined (DHCP mode disabled)
Gateway address	192.168.0.1	Four groups of numbers assigned by the Network server (DHCP mode enabled) or user defined (DHCP mode disabled)
DNS Server	168.95.192.1	Four groups of numbers assigned to the network server
DHCP Client	Enable	<p>The default setting (Enable) sets the DHCP client in Dynamic mode. Dynamic mode allows the Network server to automatically assign the IP address, subnet mask, and Gateway address.</p> <p>If the DHCP client is set to disable the DHCP client is set to Static mode. Static mode allows the user to manually assign the IP address, subnet mask, and Gateway Address.</p> <p>Note: If the user manually assigns the IP address, the DHCP client must be set to Disable.</p>

## System Tools

**Firmware Backup** – click the **Backup** button and you will get a pop-up to save a BIN file of the current Firmware and settings. Save in a location that will be easy for you to remember and the file may be renamed to user specifications.

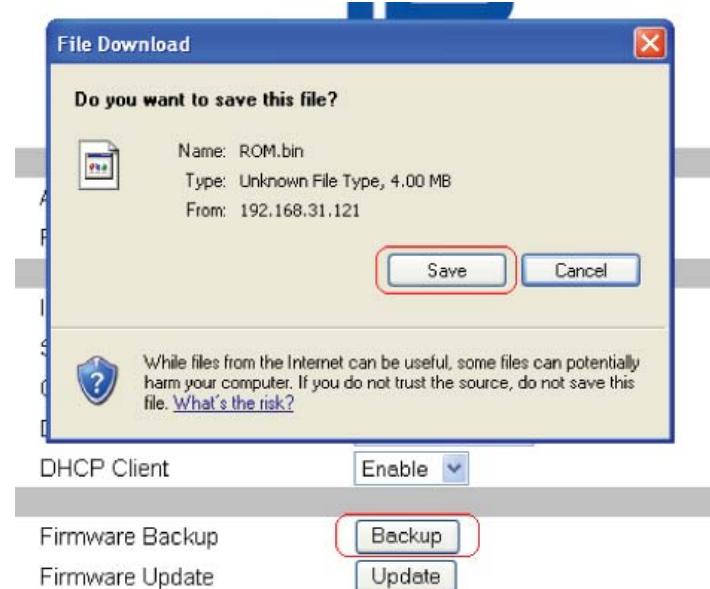

Figure 34: Controller Firmware Backup

**Firmware Update** – click **Update** to install the most recent firmware for your midspan or to re-install a firmware that was backed-up. Before proceeding with this step, users should ensure that the connection between the PC and Midspan is secure and will not be interrupted as this may take a few minutes.

Figure 35: Controller Firmware Update

Click **browse** then locate your firmware file (it will have a .bin file extension). Then click **update**.

Firmware file example:

4,096 KB BIN File

7/29/2009 10:42 AM

**Restore Default Settings** – This function is used to revert back to the default settings for the Firmware. This will undo any changes that you've so far made to the Firmware configuration. After using this function users will have the option to go back or to reboot their system.

**Reboot System** – This function will reboot the system. This screen will display:

Please wait 15 seconds while the system is rebooting !

Once the system has finished rebooting it will revert back to the GUI Main Screen.

### 3.2 SNMP Settings

The new SNMP v3 has added security features that were not found on previous versions of the management protocol. These include additional password protection.

Figure 36: Controller SNMP Settings

The screenshot shows a web browser window with the URL <http://192.168.31.121/sys/>. The title bar says "Device Configuration". On the left, there's a sidebar with icons for Status, System, and SNMP. The main area is titled "SNMP Setting". It contains fields for SNMP Versions (checkboxes for V1, V2, V3, with V3 checked), Community String (get: public, set: private), User (admin), Authentication Mode (HMAC-MD5 selected), Authentication Password, Privacy Mode (CBC-DES selected), Privacy Password, and Trap hosts (five empty input fields). A "Save" button is at the bottom.

Table 6: SNMP Settings

SNMP Settings		
	Default Setting	Description
SNMP Versions	V1/V2/V3	This function describes the current version of SNMP management that the user is running. This version is V3.
Get Community String	Public	Option to set to public or private
Set Community String	Private	Option to set to public or private
User	Admin	Logon name that may be defined by the user. If changed the information should be written in a safe place for future reference
Authentication Mode	HMAC-MD5	Option to set encryption to HMAC-MD5 or HMAC-SHA1
Authentication Password	(blank)	User defined password may be left blank or 1-18 characters in length. If changed the information should be written in a safe place for future reference. This option may be used in place of the community string

Privacy Mode	CBC-DES	Option to set privacy encryption to CDC-DES or CFB-AES-128
Privacy Password	(blank)	User defined password may be left blank or 1-18 characters in length. If changed teh informaiton should be written in a safe place for future reference. This option may be used in place of the Community String.
Trap Hosts	0.0.0.0	Trap Hosts are the destination IP addresses that you want the Traps to be sent to.
	0.0.0.0	
	0.0.0.0	
	0.0.0.0	

**NOTE:** Trap Notifications are block from entering through the Windows Firewall. Please configure the Windows Firewall settings to allow incoming Network Connections, by adding a specific program (i.e. the SNMP Console).

If the user is using the Authentication and Privacy passwords, they must remember these to use the Phihong GUI. Open the Phihong GUI and locate and click **setting**.

Figure 37: GUI Connection Information

A pop-up for the **User Security Parameters** will allow you to enter the correct IP Address of your midspan. If the user is using the **Authentication and Privacy Passwords** ensure that **SNMPv3** is checked and enter in the correct passwords in the spaces provided. **The default passwords for both are: 12345678**. Ensure that the User also matches the name entered in the Controller Setup.

Figure 38: GUI User Security Parameters

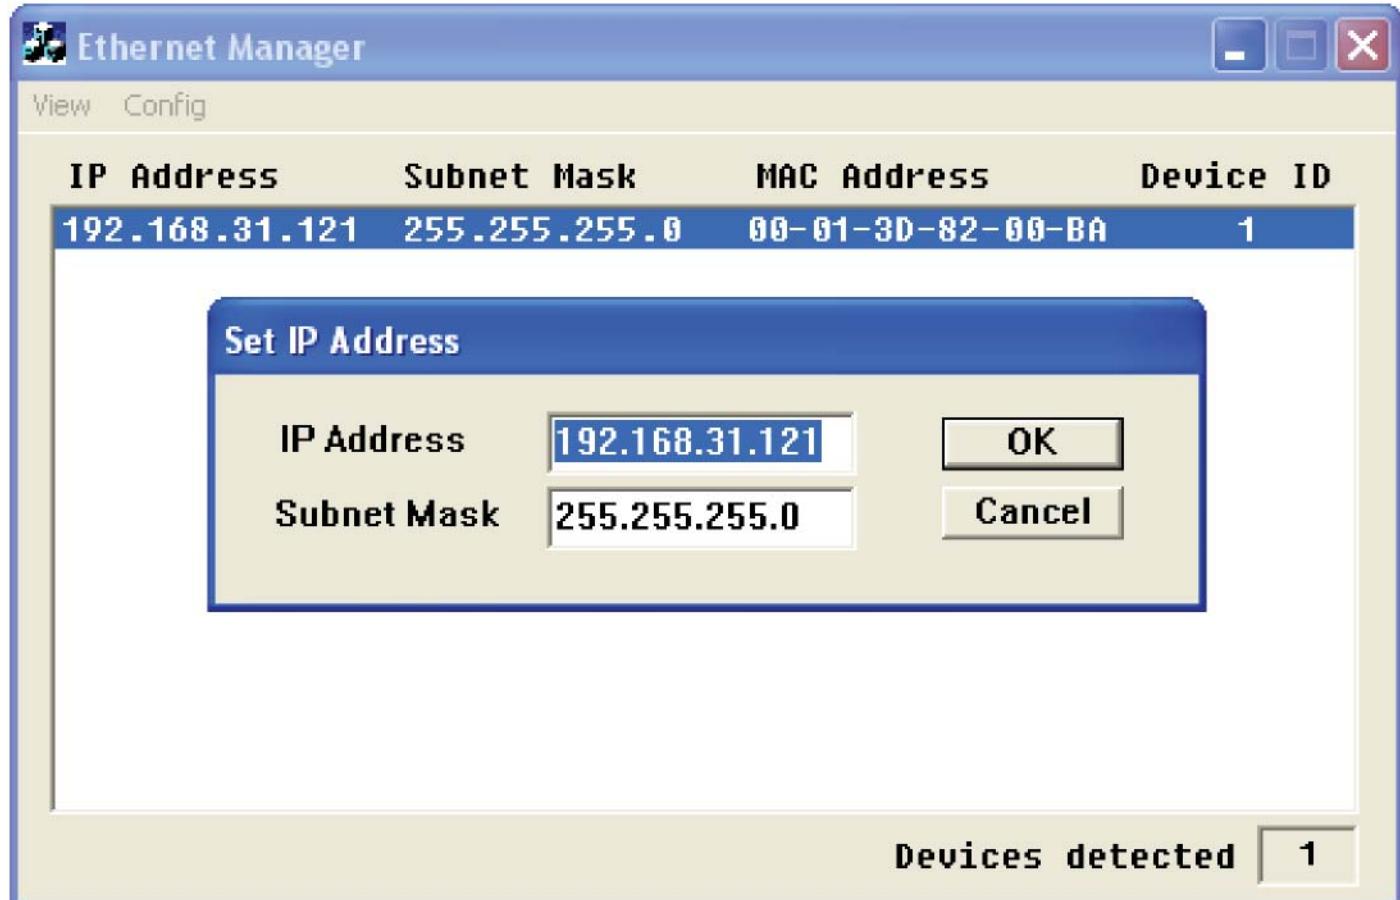

If you wish to run your SNMP device in Static mode, you can also configure your IP Address and Subnet Mask through the Ethernet Manager tool (etm.exe).

**Click Config » IP Address**

**NOTE:** From the System Setup menu in the Controller, your **DHCP Client** setting must be **Disable**.

Figure 39: Ethernet Manager Set IP Address

#### 4. DHCP Client – Dynamic or Static Mode

Check your Local Area Connection Status:

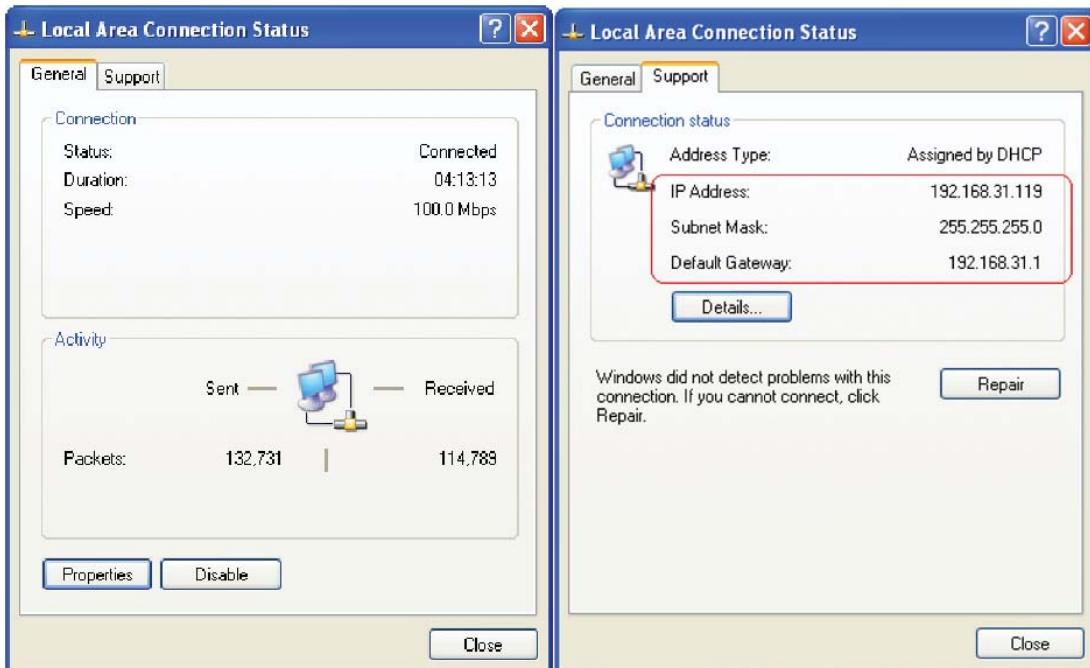

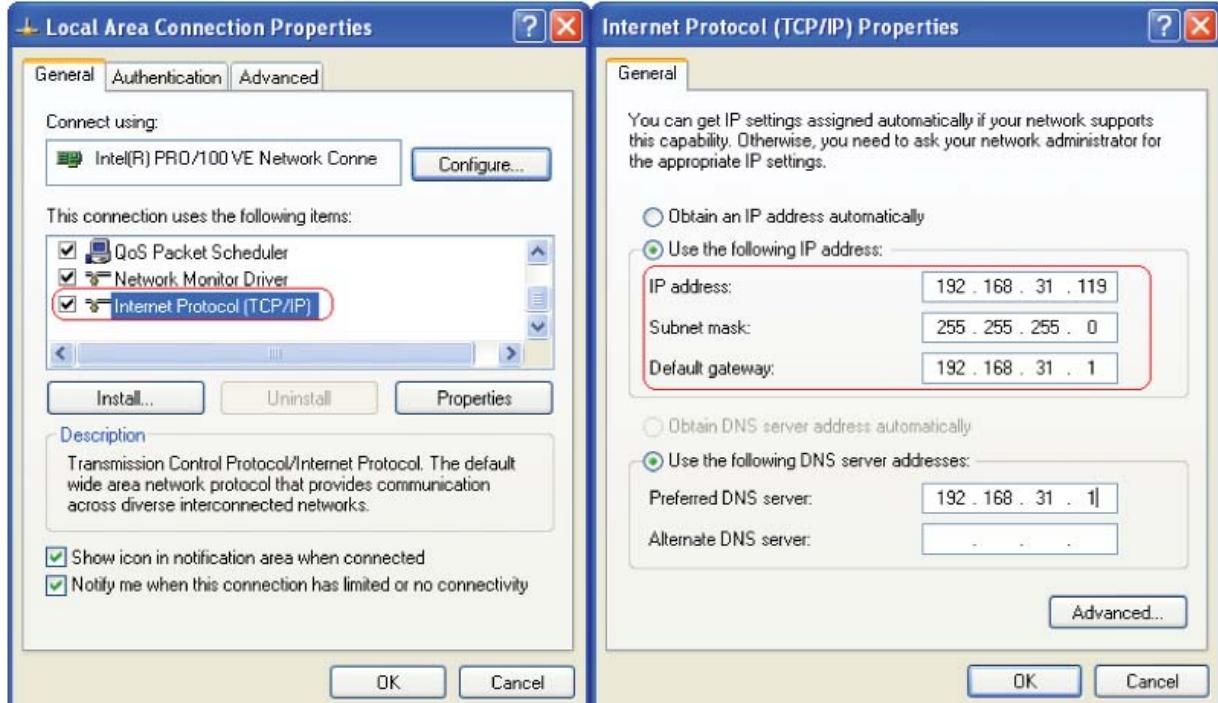

Figure 40: Local Area Connection Status

Click **Properties**. Double click Internet Protocol (TCP/IP) to view the properties. If the **DHCP Client** is **Disabled**, it is in Static mode. The user has the option to manually set the IP Address, Subnet mask, and Gateway Address for your PC. If the **DHCP Client** is **Enabled**, it is in Dynamic mode (obtain an IP address automatically). The Network will automatically set the IP Address, Subnet Mask, and Gateway Address for your PC.

Figure 41: Local Area Connection Properties/Internet Protocol Properties

## 5. Setup NIC Midspan with Phihong GUI

Please locate the Phihong POE GUI on your desktop or from your Start menu.

Step 1: Choose Connection Type: SNMP/LAN & WAN and click **Setting** to access User Security Parameters. Users should be aware to input the exact device IP Address.

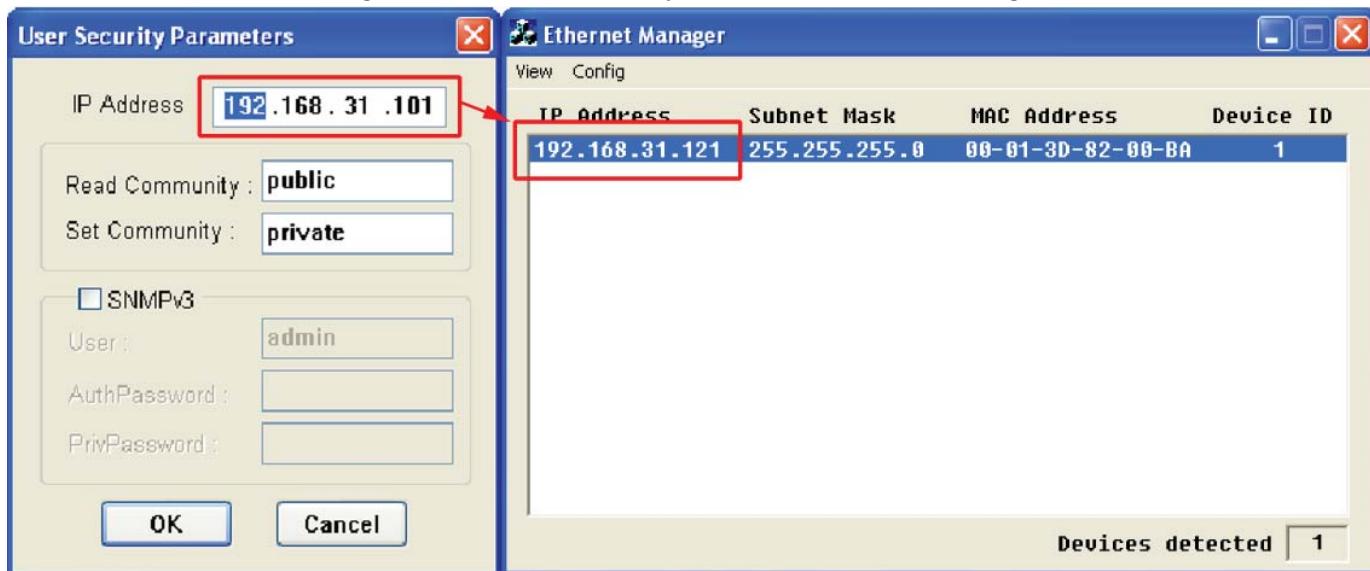

Figure 42: GUI User Security Parameters

OR

**NOTE:** Ensure that you are using either the community string or SNMPv3 encrypted passwords set using the Controller System setup, or the GUI will not detect the midspan. To verify the IP Address for your midspan, use the Ethernet Manager tool mentioned in earlier sections. The default password for both AuthPassword and PrivPassword is: **12345678**. Users may change these using the http:// access described in section 2 of Appendix B: Advanced Setup Options.

Figure 43: GUI User Security Parameters/Ethernet Manager

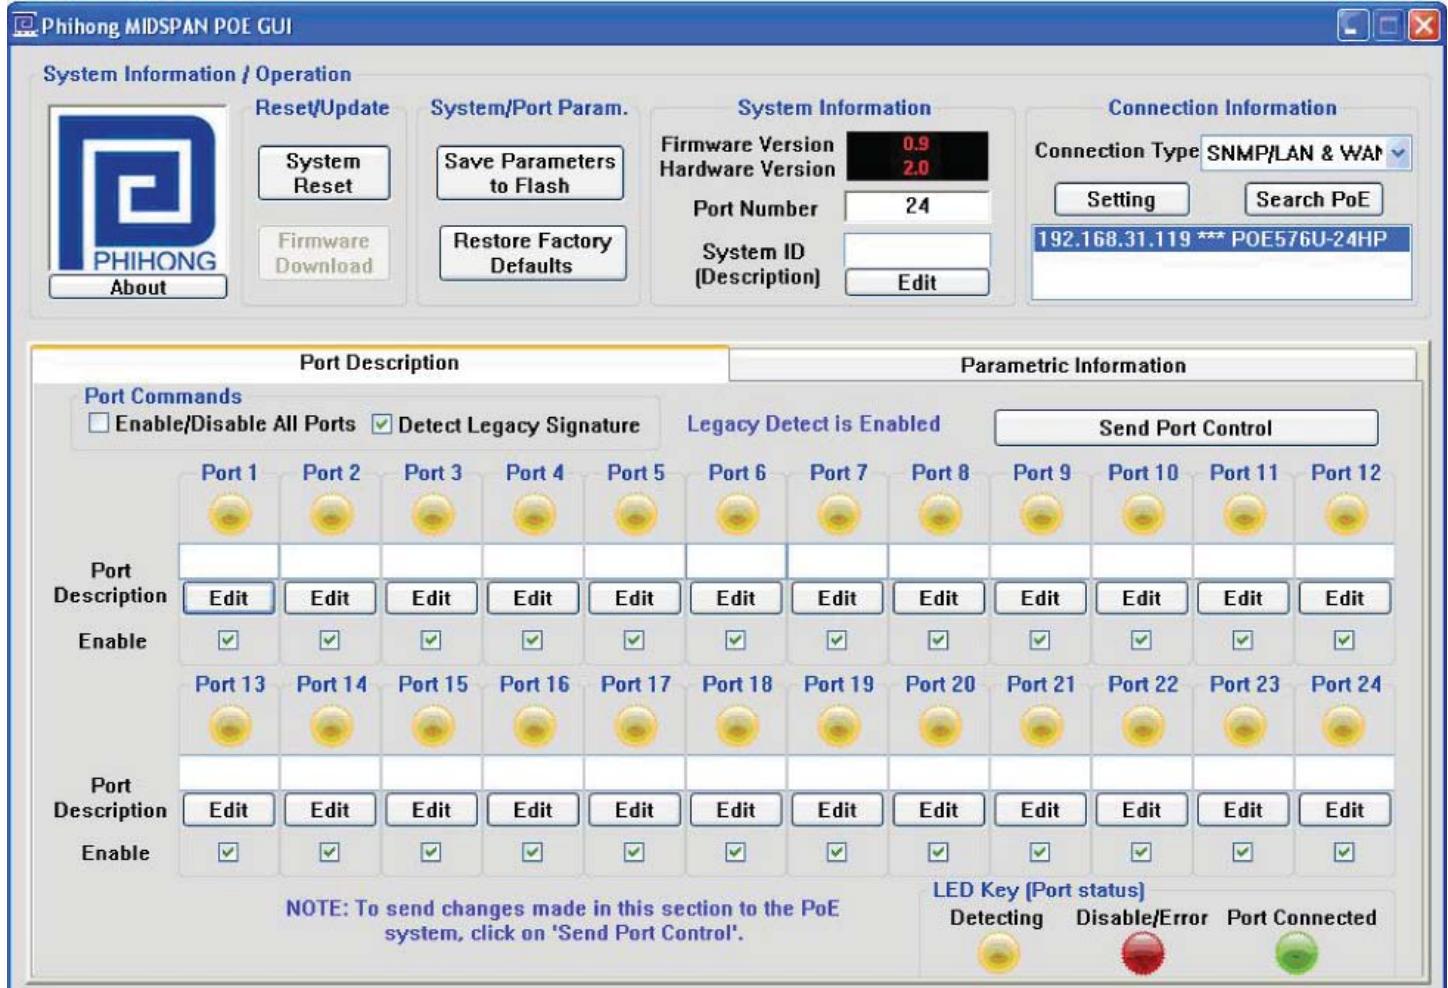

Step 2: Select Search POE: If Phihong POE device is found, click to select device

Figure 44: GUI Connection Information

**NOTE:** The IP address will be saved internally for the next use.

Figure 45: GUI Main Window

All features except for the **Firmware Download** are supported. Please refer to **section 4 – Midspan GUI** of this document for the full description of the Phihong GUI features. To update firmware using SNMP please refer to **section 7 - Controller Setup**.

## Appendix C

### SNMP MIB:

Phihong USA Corp. registered Enterprise ID: **1.3.6.1.4.1.24852**

SNMP Version: **SNMPv3**

TCP, UDP Port: **161** SNMP (Simple Network Management Protocol)1

Table 7 : SNMP MIB

OID	Name	Type	Value	Description
1.3.6.1.24852.2.2.1.0	poeSystemActionHubReset	INTEGER	ready (0) reset (1)	Reset the POE Controller
1.3.6.1.24852.2.2.2.0	poeSystemActionHubRestoreFactoryDefault	INTEGER	ready (0) restore (1)	Restore Factory Defaults
1.3.6.1.24852.2.2.3.0	poeSystemActionHubSaveconfiguration	INTEGER	ready (0) save (1)	Save the POE parameters to flash
1.3.6.1.24852.2.2.4.0	poeSystemAllPortPowerEnable	INTEGER	ready (0) disable (1) enable (2)	Setting this object at a value enable (2) enables detection mechanism for all ports. Setting this object at a value disable (1) disables detection mechanism for all ports
1.3.6.1.24852.2.2.6.0	poeSystemHWVersion	DisplayString	Read-Only	System hardware version for the main board
1.3.6.1.24852.2.2.7.0	poeSystemNumberOfChannel	INTEGER	Read-only	Number of ports available in the system
1.3.6.1.24852.2.2.8.0	poeSystemProductPartNumber	INTEGER	Read-only	Displays the product part number
1.3.6.1.24852.2.2.10.0	poeSystemFirmwareVersion	DisplayString	Read-only	System firmware version for the PoE
1.3.6.1.24852.2.2.11.0	poeSystemDescription	DisplayString (SIZE (0...10))	Read-Write	System Description, max. length of 10 characters
1.3.6.1.24852.2.2.12.0	poeSystemConsumptionPower***	INTEGER	Read-only	Measured power usage expressed in Watts
1.3.6.1.24852.2.2.13.0	poeSystemControlACPower***	INTEGER	Read-Write	Sets the value of available power in Watts to be supplied by primary (AC) power source
1.3.6.1.24852.2.2.14.0	poeSystemControlDCPower	INTEGER	Read-Write	Sets the value of available power in watts to be supplied by secondary (DC) power supply

1.3.6.1.24852.2.2.15.0	poeSystemControlBothPower***	INTEGER	Read-Write	Sets the value of the total available power in Watts to be supplied by both power sources
1.3.6.1.24852.2.3.1.1.1~24	poePortIndex	INTEGER	Read-only	A unique value for each port.
1.3.6.1.24852.2.3.1.2.1~24	poePortPowerEnable	INTEGER (1.2147483647)	Disable (1) Enable (2)	Setting this object at a value enable (2) enables the detection mechanism for this port.  Setting this object at a value disable (1) disables the detection mechanism for this port
1.3.6.1.24852.2.3.1.3.1~24	poePortControlMaxPower***	INTEGER	Read-Write	This command specifies the max. power in watts to the port
.6.1.4.1.24852.2.3.1.4.1.0	poePortCurrentStatus***	INTEGER	undercurrent (1) overcurrent (2) both (3) ok (4)	Describes a current port status related to the power generation, the value undercurrent (1) indicated that the port current is below the minimal value since the attribute was last cleared. The value over current (2) indicates that the port exceeds the maximum value since the attribute was last cleared. The value both (3) indicates that both undercurrent and over current since the attribute was last cleared. The value ok (4) indicates neither an undercurrent or an overcurrent condition has been detected since the attribute was last cleared. This attribute is cleared through the power-Portcurrentstatus-Clear Action.

1.3.6.1.4.1.24852.2.3.1.5.0	poePortCurrentStatusclear***	INTEGER	off (1) clear (2)	Setting the value of this object to clear (2) clears the value of the poePortStatus and enables the agent to update the poePortStatus. During Read operation this value will be off (1)
1.3.6.1.4.1.24851.1.2.1.6.1~24	porPortDescription	DisplayString (SIZE (0...10))	Read-Write	Describes the port descriptionfor the port
1.3.6.1.4.1.24852.2.3.1.7.1~24	poePortDetectionStatus***	INTEGER	Read-only	Off (0) DiscR (1) DiscC (3) RampUp (4) RampDown (5) SampleI (8) SampleV (9)

1.3.6.1.4.1.24852.2.3.1.10.1~24	powPortPowerPriority***	INTEGER	Critical (1) High(2) Low (3)	Sets port priority
1.3.6.1.4.1.24852.2.3.1.11.1~24	powerPortPower	INTEGER	Read-only	Port Power reading in mWatts
1.3.6.1.4.1.24852.2.3.1.12.1~24	poePortVoltage	INTEGER	Read-only	Port Voltage reading in Volts
1.3.6.1.4.1.24852.2.3.1.13.1~24	poePortCurrent	INTEGER	Read-only	Port Current reading in mAmps
1.3.6.1.4.1.24852.2.3.1.14.1~24	poePortResistance	INTEGER	Read-only	Port Resistance read in Ohm
1.3.6.1.4.1.24852.2.4.1.1.1~24	poeTrapsControlGroupIndex	INTEGER (0.65535)	Not-accessible	Uniquely describes the group the Trap control is located
1.3.6.1.4.1.24852.2.4.1.2.1~24	poeTrapsControlEnable	INTEGER	TrapsDisabled (1) TrapsEnabled (2)	Enables and disables the Trap from the Agent
1.3.6.1.4.1.24852.2.5.1	poePortHWFailTrap	NOTIFICATION		Hardware Failure Trap
1.3.6.1.4.1.24852.2.5.2	poePortPeakOverCurrentTrap	NOTIFICATION		Peak over Current Trap

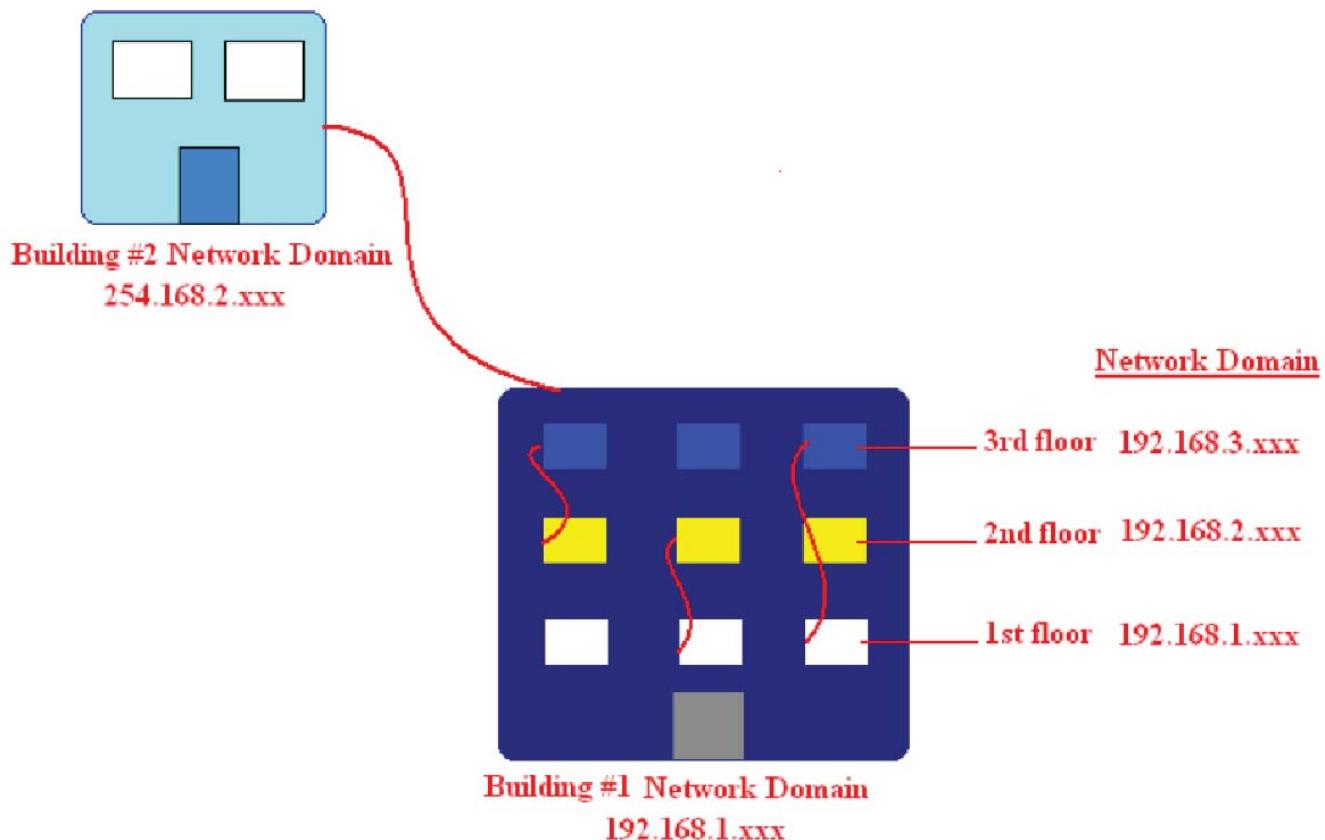

1.3.6.1.4.1.24852.2.5.3	poePortOverloadTrap	NOTIFICATION		Overload Trap
1.3.6.1.4.1.24852.2.5.4	poePortDiscoveryFailTrap	NOTIFICATION		Discovery Failure Trap
1.3.6.1.4.1.24852.2.5.6	poePortDisconnectTrap	NOTIFICATION		PortDisconnectTrap
1.3.6.1.4.1.24852.2.5.7	poePortVoltageFailTrap	NOTIFICATION		Port Voltage Fail Trap

\*\*\* This function is currently disabled. Reserved for future use.

- 1 The NIC Interface Midspan performs under the TCP/IP, UDP port of 161. UDP port 161 for SNMP is an official IANA registered EDP port number. While attempting to connect to the NIC Interface Midspan via a different network domain<sup>2</sup> the user must acknowledge that the local network supports the UDP port 161.

## 2. Different Network Domain

Figure 46: Network Domain Diagram

### Description of Diagram:

- Building #1 has one main Network Server that links all three floors together.
- Building #2 has one main Network Server with the Network Domain of 254.168.2.xxx.

### Different methods of connection:

**NOTE:** Taking consideration that the **Access Control** from the **Controller Setup** is **Disabled** (allowing all access)

- **Connection within the same Network Domain.** (Please refer to the diagram above for Building #1. For instance:
  - The NIC Interface Midspan is connected to the Network Domain of **192.168.1.xxx** located on the 1st floor. All Computer connected to the Network Domain of **192.168.1.xxx** can communicate with the NIC Interface Midspan.
  - The NIC Interface Midspan remains connected on the Network Domain of **192.168.1.xxx**. Since Building 1 has a main Network Server that links all three floors together, the computers on the 2nd (**192.168.2.xxx**) and 3rd (**192.168.3.xxx**) floors can also communicate with the NIC Interface Midspan.

- **Connection between different Network Domains.** (Please refer to the diagram above Building #2)  
For instance:

- The NIC Interface Midspan is connected to the Network Domain of Building #1 (**192.168.1.xxx**) would like to communicate with the NIC Interface Midspan from Building #1. Building #1 must configure the main Network server to allow access from an outside source, in this case Building #2. Building #1 must be able to support UDP port 161, for SNMP. Once the access is allowed, Building #2 can communicate with the NIC Interface Midspan.

## Appendix D: Frequently Asked Questions

**Q:** What happens if I forget my username and passwords for the NIC Interface?

**A:** Please contact Phihong Sales for further information on this topic.

**Q:** What is the function of the “current share” pin on the CD Power connector? Are there any protocols or procedures associated with it?

**A:** The DC solution contains 3x 500W 50V rectifier modules (1000W N+1) with custom cables available for connection between the rectifier rack and up to 4 midspans. The current share pin is an option which could be used to have the power supply inside the midspan current share with the rectifiers. There are no protocols or procedures associated with it other than it's designed only to work with our rectifier system and even then its not perfect sharing due to the inrush limiting components inside the midspan located on the DC input.

**Q:** What type of Display Properties settings are required to run the Phihong SMNP v3 GUI?

**A:** 16-Bit: 1024 X 768 pixels, 1280 X 1024 pixels

32-Bit: 1024 X 768 pixels, 1280 X 1024 pixels

If the settings are set to be at least the values shown below, the edges of the GUI window will be cropped.

16-Bit: 640 X 480 pixels, 800 X 600 pixels

32-Bit: 640 X 480 pixels, 800 X 600 pixels
